DESCRIPTION

PT8211 is a dual channel, 16 bit Digital-to-Analog Converter IC utilizing CMOS technology specially designed for the digital audio applications. The internal conversion architecture is based on a R-2R resister ladder network, internal circuit is well matched and a 16 bit dynamic range is achieved even in whole supply voltage range. PT8211 also enhanced the performance of timing responsibility in digital serial bus, in a company with the fast switching R-2R network that make 8X oversampling audio signal is also supported.

PT8211 can be supported wide range of sample frequency; it is compatible with TDA1311 by functionally. Its digital input timing format is Least Significant Bit Justified (LSBJ), or so called Japanese input format. Digital code format is two's complement and MSB first. PT8211 is available in 8-pin SOP or DIP.

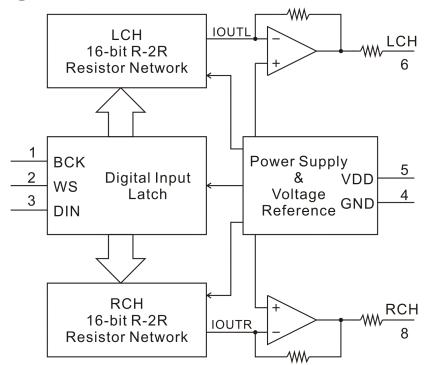

FEATURES

- CMOS technology
- Support 3.3V bus input level
- Low power consumption
- Two audio channel output in the same chip
- 16-bit dynamic range
- Low total harmonic distortion
- No phase shift between both output channel
- Available in 8 pins, SOP or DIP

APPLICATIONS

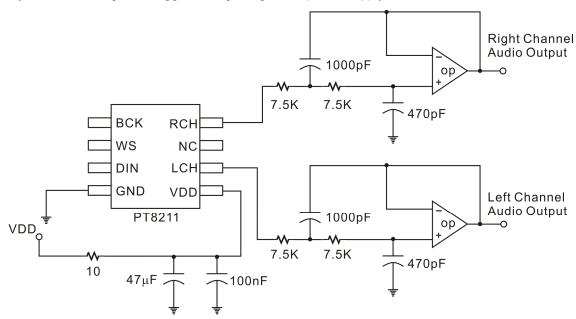

- Digital audio equipment
- CD ROM/VCD
- Multimedia sound card
- MPEG decoder card

BLOCK DIAGRAM

APPLICATION CIRCUIT AND NOTE

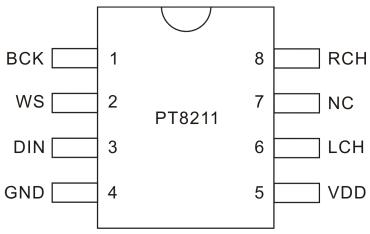

To further suppress residual noise, we suggest placing an additional low pass filter after the analog output of PT8211. Please refer to the circuit diagram below. This is a simple second-order analog post filter. If low noise output is very important for your circuit design we suggest using a regulated power supply.

ORDER INFORMATION

Valid Part Number	Package Type	Top Code
PT8211-S	8 Pins, SOP, 150mil	PT8211-S
PT8211	8 Pins, DIP, 300mil	PT8211

PIN CONFIGURATION

PIN DESCRIPTION

Pin Name	I/O	Description	Pin No.
BCK	I	Serial Bit Clock Input	1
WS	I	Word Select Clock Input Pin	2
DIN	I	Data Input Pin	3
GND	-	Ground	4
VDD	Power	Positive Power Supply	5
LCH	0	Left Channel Output	6
NC	-	No Connection	7
RCH	0	Right Channel Output	8

FUNCTION DESCRIPTION

The serial bus input data format of PT8211 is Japanese or called LSBJ (Least Significant Bit Justified) format. Each valid DIN data will be shifted to the input register in the rising edge of the BCK, only the first 16bit data (from MSB) is valid if the input data length is more than 16bits, other data bit will be truncated. The clock frequency of the BCK could run up to 20MHz and supported to 8× over-sampling in 48KHz WS clock rate. Both left and right data words are time multiplexed. Please refer to the diagrams for timing and input signal formats.

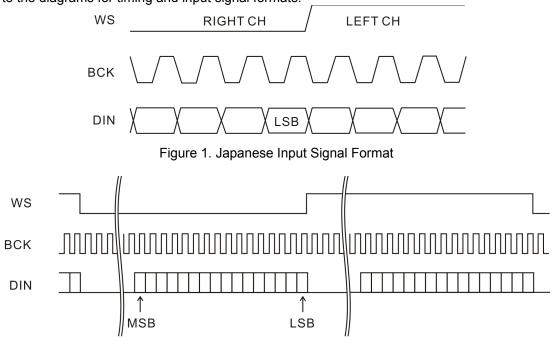

Figure 2. Timing and Input Signal Formats

The DIN data must be the 2's complementary format and the MSB (Most Significant Bit) must be the first. When the Word Select (WS) clock in the Low level, the DIN data will be shifted to the right input register. likewise, the DIN data will be shifted to the left input register when WS clock in the High level. The buffered DIN data then feeding to the DAC after both input register are all settled down, this can eliminated the phase shift happened between two channel output. DAC output is generated by a 16 bit R-2R resistor ladder network. This signal is driven to the Right/Left Channel (RCH/LCH) via the buffer operational amplifier.

V1.6 4 February 2012

ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Rating	Unit
Power supply voltage	V_{DD}	-0.3 ~ 7.0	V
Input voltage	V_{l}	$-0.3 \sim V_{DD} + 0.3$	V
Operating temperature	Topr	-40 ~ +85	°C
Storage temperature	Tstg	-65 ~ +150	°C

DC CHARACTERISTICS

(Test Conditions: Ta=25°C, VDD=5.0V, unless otherwise specified)

= *		. ,				
Parameter	Symbol	Condition	Min	Тур	Max.	Unit
Power supply voltage	VDD	THD<1%	3	5	6	V
Operating current	Is	VDD=5V	10	13	18	mA
Digital input high level (see Note)	V _{IH}		1.8	2.2	Vcc	V
Digital input low level (see Note)	V _{IL}		GND	1.2	1.8	V

Note: Digital input level will change due to supply voltage.

TIMING CHARACTERISTICS

(Please refer to the Figure 1)

sace refer to the rigure 1)						
Parameter	Symbol	Condition	Min	Тур	Max	Unit
Bit clock frequency	Fbck	BCK	-	-	18.4	MHz
